Question 11 **(Suggested maximum time: 5 minutes)**

(a) In a particular **linear** sequence, the second term is 40 and the sixth term is 116.
Fill in the boxes below to show the rest of the first six terms of this sequence.

21 ,	40 ,	59 ,	78 ,	97 ,	116

$T_2 = 40$ $T_6 = 116$

$T_6 - T_2 = 76$

(b) Orla is asked to write down a **quadratic** sequence. She writes down the following:

5, 6, 9, 14, 22, 30, 41

1 3 5 8 8 11

Exactly **one** of the terms in Orla's sequence is incorrect.

Write down the correct quadratic sequence in the spaces below.
You may only change **one** of the terms in Orla's sequence.

5 6 9 14 22 30 41

1 3 5 8 8 11

2 2 3 0 3

Correct Sequence: 5 , 6 , 9 , 14 , 21 , 30 , 41
